Art Unit: 2811

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 16, drawn to a leadframe device , classified in class 257, subclass 666.
 - II. Claims 17 - 22, drawn to a process of making a leadframe device, classified in class 438, subclass 15+.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the Group I invention would not necessarily imply unpatentability of the Group II invention, since the device of the group I invention could be made by processes materially different from those of the Group II invention for example, instead of activating said surfaces by immersing said leadframe into an acid solution, the acid solution can be poured continuously onto the surfaces to activate.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

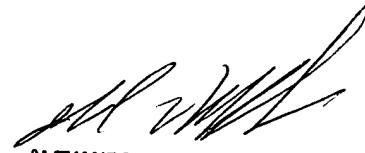

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any
